

***The Space Show* focuses on timely and important issues influencing the development of outer-space commerce and space tourism, as well as other related subjects of interest to us all.**

On Sunday, October 24, 2004, Mr. Dave Micheletti was interviewed by Dr. David Livingston, host of a 90-minute national radio talk show called *The Space Show*, which is broadcast weekly from the San Francisco area. The show begins with Dr. Livingston introducing his guest and asking questions with the guest responding for about 30 minutes. The remainder of the show involves the guest answering questions from the listening audience on the telephone or via e-mail.

The topic of the October 24th show was “Montana’s Burgeoning Aerospace Industry.” Mr. Micheletti talked about how Montana’s private sector and university system have been involved in some very advanced aerospace-related technology areas for the past ten years, and how the Montana Aerospace Development Association has been formed to facilitate and support the state’s efforts in developing a new aerospace industrial sector. Mr. Micheletti also discussed the Mariah Hypersonic Wind Tunnel Development Program being directed by MSE Technology Applications at the Mike Mansfield Advanced Technology Center.

Mr. Micheletti is Vice President of Advanced Energy and Aerospace Programs at MSE Technology Applications, Inc. in Butte, Montana, and also serves as President of the Montana Aerospace Development Association.

The Space Show programs can be listened to via Windows Media Player at <http://www.thespaceshow.com/>.
